

Assignment - 1 (ML)

Nishant Parekh [J046]

Day 0

In [2]:

```
# Read a full line of input from stdin and save it to our dynamically typed variable, input_string.
input_string=input()

# Print a string literal saying "Hello, World." to stdout.
print('Hello, World.')

# TODO: Write a line of code here that prints the contents of input_string to stdout.
print(input_string)
```

Hello, Nishant
Hello, World.
Hello, Nishant

Day 1

In [6]:

```
a=5
b=5.0
c='HackerRank '
# Declare second integer, double, and String variables.
d=3
e=6.0
f='Passed'

# Read and save an integer, double, and String to your variables.
j = int(input())
o = float(input())
g = input()

# Print the sum of both integer variables on a new line.
print(a+j)

# Print the sum of the double variables on a new line.
print(b+o)

# Concatenate and print the String variables on a new line
print(c+g)
# The 's' variable above should be printed first.
```

5
3.69
2
10
8.69
HackerRank 2

Day 2

In [7]:

```
mealCost = float(input())
tip = int(input())
tax = int(input())
```

```
tip=tip*mealCost/100;
tax=tax*mealCost/100;
totalcost=mealCost+tip+tax;

print ("The total meal cost is %s dollars." %str(int(round(totalcost, 0))))
```

```
70
50
20
The total meal cost is 119 dollars.
```

Day 3

In [9]:

```
import sys

n = int(input().strip())

# if 'n' is NOT evenly divisible by 2 (i.e.: n is odd)
if n%2==1:
    answer = "Weird"

elif n>20:
    answer = "Not Weird"

elif n>=6:
    answer = "Weird"

else:
    answer = "Not Weird"

print(answer)
```

```
10
Weird
```

Day 4

In [10]:

```
class Person:
    def __init__(self,initialAge):
        # Add some more code to run some checks on initialAge
        if(initialAge > 0):
            self.age = initialAge
